## Our purpose

# Fewer days with wounds

*Faster healing is what wound care patients need. It is what nurses care about. And it is what healthcare authorities want to see. That's why we share the purpose and passion to achieve fewer days with wounds.*

### Engaging with patients and healthcare professionals

A chronic wound can take years to heal. During this time, patients have to live with the discomfort and pain of an unhealed wound. They may also have to deal with the smell of exudate and the social isolation that this can bring. This is in addition to what caused the wound in the first place – a traumatic accident, surgery, or a chronic disease. By engaging with nurses and users, we have gained a deep understanding of the challenges that healthcare professionals face – and how living with a wound affects a patient's quality of life. Inspired by this, we have developed a portfolio of products to promote optimal self-care routines and increase the rate of successful outcomes.

### Intelligent design for optimal care

We believe wound management and skin care are inseparable. Based on our extensive expertise in both areas, we have developed a range of products designed for effective and customised care. Supporting all stages of the healing process, our dressings help to efficiently manage exudate by reducing exudate pooling and fighting infection and biofilms\* – and in this way promote optimal healing conditions. In addition, they are developed to cater for individual needs – which makes it far easier for healthcare professionals to ensure the right treatment. As has been clinically documented, the portfolio's combination of advanced healing technology with user-friendliness creates the best conditions for keeping skin healthy and helping wounds to heal.

### Providing deeper knowledge and guidance

We recognise that caring for wounds and skin can be a complex and uncertain process. Wounds change constantly, which means that healthcare professionals must respond to each change in the right way to ensure optimal healing. That is why we are dedicated to sharing deeper knowledge and guidance through our education and collaboration platform, Coloplast® Professional. To increase knowledge of modern wound healing principles and improve the standard of care for wound patients around the world, we have developed Coloplast® HEAL. HEAL is an internationally endorsed education programme that offers clinically relevant and easy-to-access training courses on a variety of wound care topics. All of these have been developed in close collaboration with international wound care experts and endorsed by EWMA (European Wound Management Association). To support healthcare professionals with practical guidance, we have also developed the Triangle of Wound Assessment®\*\* – a holistic wound assessment framework that guides healthcare professionals to a systematic and intuitive way of assessing and managing all three areas of the wound: wound bed, wound edge and periwound skin. Coloplast HEAL and The Triangle of Wound Assessment are part of our

ongoing efforts to provide healthcare professionals with practical and easy-to-use tools that help them to efficiently and confidently manage wound and skin complications.

### Driving change through closer collaboration

We fight to raise the global standard of wound care. Since 2014, we have funded a number of EWMA endorsed Centres of Excellence in China. Set up at established hospitals, these centres offer patients systematic diagnosis and standardised treatment from medical professionals trained in wound care. They also give healthcare professionals access to ongoing education and training on our products. We have also sponsored the training of around 90 doctors, whose knowledge and expertise have spread to other hospital. This has already helped to reduce the amputation rate for patients with diabetic foot ulcers and increased the wound healing rate on a national scale.

\*These claims are not cleared by FDA in the US

\*\*In the US and Canada, the Triangle of Wound Assessment is not available.

# Managing exudate is a significant clinical challenge when treating wounds

Conventional foam dressings leave a gap between the dressing and wound bed, increasing the risk of exudate pooling, which can be difficult to handle appropriately<sup>1,2</sup>

Leakage of wound exudate to wound edge and periwound skin, which leads to maceration<sup>1</sup>

Risk of infection and biofilm formation due to bacterial growth<sup>2</sup>

High levels of exudate may lead to increased treatment costs due to frequent dressing changes and unnecessary use of fillers<sup>1,2</sup>

Odour, discomfort and pain impact patient quality of life (QoL)<sup>4</sup>

91% of HCPs face challenges with exudate pooling, infection, maceration and leakage when treating chronic wounds<sup>3</sup>

96% of HCPs agree that effective management of wound exudate is one of the best ways to promote an optimal healing environment<sup>4</sup>

# Biatain®

Biatain® Silicone with 3DFit Technology conforms to the wound bed to fill the gap and reduce exudate pooling for optimal healing conditions.

*A perfect fit. Every time.*

## Unique 3DFit Technology fills the gap and reduces exudate pooling

**Conforms to the wound bed**  
to fill the gap and reduce exudate pooling for optimal wound healing conditions

**Absorbs vertically**  
to reduce risk of maceration

**Retains exudate**  
and 99.98% bacteria  
Absorbs and retains exudate containing bacteria

# Treatment of *non-infected wounds*

## Biatain® Silicone

*A perfect fit. Every time.*

Biatain Silicone with 3DFit Technology is a soft and conformable polyurethane foam dressing with a bacteria- and water proof top film, a lock-away layer and a gentle silicone adhesive layer. It can be used on a broad range of exuding chronic and acute wounds making Biatain Silicone the obvious choice for moist wound healing of commonly occurring wounds.<sup>5,6</sup>

- Conforms to the wound bed
- Absorbs vertically
- Retains exudate and 99.98% bacteria

### Usage

Biatain Silicone is indicated for a wide range of exuding chronic and acute wounds. They include leg ulcers, pressure ulcers, non-infected diabetic foot ulcers, donor sites, postoperative wounds and traumatic wounds. It can be used in combination with compression therapy and may be left in place for up to 7 days.

# Biatain® Silicone Multishape

Award-winning, user-friendly design also for difficult to dress areas

reddot award 2017  
winner

Scan for application video

## Preparation

- Cleanse the wound and periwound skin in accordance with local guidelines, e.g. lukewarm water or physiological saline solution
- Gently dry the periwound skin and ensure the skin is completely dry
- If any film, cream, ointment or similar product is used, allow the periwound skin to dry before applying the product

## Application

Use protective films to avoid touching adhesive side and ensure aseptic application.

Remove center protective film.

Apply adhesive side towards wound.

Remove remaining protective films one at a time.

Gently secure each side to ensure an even and smooth fit on the skin.

Gently run your fingers around border to confirm securement.

Dressing is applied.

Please refer to the Instructions for Use (IFU) packaged with the product for further information.

# Biatain® Silicone Lite

Biatain Silicone Lite is a thin, ultra flexible and absorbent polyurethane foam dressing with a bacteria- and water proof top film and a soft silicone adhesive layer. The soft and thin foam pad at skin level makes it comfortable to wear and is suited for users that need increased mobility.<sup>6,7</sup>

- Conforms to the wound bed
- Absorbs vertically
- Retains exudate

## Usage

Biatain Silicone Lite can be used for a wide range of non-to low exuding chronic and acute wounds. They include leg ulcers, pressure ulcers, non-infected diabetic foot ulcers, donor sites, postoperative wounds and traumatic wounds. It can be used in combination with compression therapy and may be left in place for up to 7 days.

### Biatain Silicone Lite

Item code	Size in cm

334463	12.5 x 12.5
334520	5 x 5
334530	5 x 12.5

# Biatain® Non-Adhesive

Biatain Non-Adhesive is a soft polyurethane foam dressing for extra fragile skin that effectively absorbs and retains wound exudate. This ensures a moist environment for healing of exuding wounds.

- Conforms to the wound bed
- Absorbs vertically
- Retains exudate

## Usage

Biatain Non-Adhesive is indicated for a wide range of exuding wounds, including leg ulcers, pressure ulcers and non-infected diabetic foot ulcers, and may be used on second-degree burns, postoperative wounds and skin abrasions. Biatain Non-Adhesive is also indicated for donor sites. Biatain Non-Adhesive is suitable for use in combination with compression therapy.

334130	15 x 15
334160	20 x 20

# Biatain<sup>®</sup> Adhesive

Biatain Adhesive is a soft and conformable polyurethane foam\* dressing with hydrocolloid adhesive that effectively absorbs and retains wound exudate.<sup>5,6,8,9</sup> This ensures a moist environment for healing of exuding wounds.<sup>10, 11</sup>

- Conforms to the wound bed
- Absorbs vertically
- Retains exudate

## Usage

Biatain Adhesive is indicated for a wide range of exuding wounds, including leg ulcers and pressure ulcers, and may be used for second-degree burns, postoperative wounds and skin abrasions. Biatain Adhesive is also indicated for donor sites. Biatain Adhesive is suitable for use in combination with compression therapy.

# Biatain<sup>®</sup> Contact

## Improved contact for undisturbed wound healing

Biatain Contact is a one-sided silicone contact layer offering properties to overcome the challenges in the treatment of ulcers and chronic or acute lesions with various levels of exudate.

- Enhanced exudate transfer
- Facilitates wound assessment
- Easy application and removal

## Usage

Biatain Contact is a silicone contact layer, indicated for the treatment of wounds and chronic or acute lesions, at various levels of exudation, to be used with a secondary absorbent dressing, such as Biatain Non-Adhesive. It can also be used as a protective layer, after appropriate fixation with adequate dressing, on non-exuding wounds or on fragile skin. On specific medical indications, it can also be used with compressive bandages.

### Biatain Silicone Contact

Item code	Size in cm
33560	5 x 7.5
33562	10 x 18
33563	15 x 25
33564	18 x 30

# Biatain® Fiber

## The strength to lock exudate

Biatain Fiber with HexaLock Technology is a soft, sterile primary wound dressing made of nonwoven sodium carboxymethyl cellulose (CMC) fibers with bicomponent (BiCo) fibers and a thermobonded net added for strength. Biatain Fiber supports autolytic debridement and desloughing which promotes the wound healing process.

- Locks in exudate
- Minimal shrinkage
- Cohesive gel

### Usage

Biatain Fiber is intended for the management of moderate to high exuding wounds, including cavity wounds. Biatain Fiber is indicated for use in acute and chronic wounds such as diabetic ulcers, leg ulcers (arterial ulcers, venous ulcers and leg ulcers of mixed aetiology), pressure ulcers (stage II-IV), exudate absorption in oncology wounds, traumatic wounds, partial thickness burns, donor sites and post-operative surgical wounds.

### Biatain Fiber

# Biatain® Alginate

Biatain Alginate is a highly absorbent alginate dressing for moderately to heavily exuding wounds of many sizes, shapes and depths.

- Recommended for cavity filling
- High dressing integrity
- Reduced risk of leakage and maceration
- Documented haemostatic effect

### Usage

Biatain Alginate can be used on moderate to heavily exuding partial to full thickness wounds. Biatain Alginate may assist in supporting the control of minor bleeding in superficial wounds. Biatain Alginate can be used with compression therapy. Biatain Alginate should not be used on dry or lightly exuding wounds or to control heavy bleeding. Biatain Alginate is indicated for pressure ulcers, venous and arterial leg ulcers, diabetic ulcers, cavity wounds, lacerations, skin abrasions, graft and donor sites, post operative surgical wounds, superficial and partial thickness burns.

### Biatain Alginate

037402	40cm/2g Filler

# Biatain® Super

Biatain Super is a highly absorbent hydrocapillary dressing providing a moist wound healing environment for exuding wounds. It is available in both an adhesive and non-adhesive version.

- Optimal moist wound healing environment for faster healing
- Suitable for highly exuding wounds
- All-in-one simple to use wound dressing

## Usage

Biatain Super can be used for the treatment of a wide range of exuding wounds, including leg ulcers, pressure ulcers, diabetic foot ulcers, second degree burns, surgical wounds and skin abrasions. Biatain Super is suitable for use under compression therapy.

### Biatain Super, Non-Adhesive

# Treatment of *infected or painful wounds*

# Biatain® Silicone Ag

## Combats infection and biofilms where it matters

Biatain Silicone Ag with 3DFit Technology conforms\* to the wound bed to reduce exudate pooling and delivers Ag at the wound bed. Biatain Silicone Ag has been shown to kill 99.99% of mature biofilms\*\* (*P. aeruginosa*) and to prevent biofilm formation (shown *in vitro*).<sup>12</sup> The dressing is also effective against a broad spectrum of bacteria and fungi for up to 7 days.<sup>12</sup>

- Kills 99.99% of mature biofilms\*\* (shown *in vitro*)
- Conforms\* and delivers Ag at the wound bed
- Absorbs vertically
- Retains exudate

### Usage

Biatain Silicone Ag is indicated for a wide range of low to highly exuding wounds with delayed healing due to bacteria or wounds at risk of infection. This includes acute wounds such as second degree burns, donor sites, postoperative wounds and traumatic wounds, and chronic wounds such as leg ulcers, pressure ulcers and diabetic foot ulcers.

# Biatain® Alginate Ag

Biatain Alginate Ag is a highly absorbent silver alginate dressing for moderately to heavily exuding infected wounds of many sizes, shapes and depths.

- Recommended for cavity filling for infected wounds
- Wound dressing containing a silver complex with a broad antimicrobial profile
- High dressing integrity
- Reduced risk of leakage and maceration
- Documented haemostatic effect

## Usage

Biatain Alginate Ag can be used on moderate to heavily exuding partial to full thickness wounds. Biatain Alginate Ag may assist in supporting the control of minor bleeding in superficial wounds. Biatain Alginate Ag may be used on infected wounds or wounds at risk of infection. Biatain Alginate Ag can be used under compression bandages. Biatain Alginate Ag should not be used on dry or lightly exuding wounds or to control heavy bleeding. Biatain Alginate Ag is indicated for post-operative wounds, trauma wounds (dermal lesions, trauma injuries or incisions), leg ulcers, pressure ulcers, diabetic ulcers, graft and donor sites, cavity wounds, superficial and partial thickness burns.

## Biatain Alginate Ag

# Physiotulle® Ag

(Discontinued)

Physiotulle Ag is a hydrocolloid based non-adherent wound contact layer with silver, designed to prevent and control wound infection to promote faster wound healing.

- Easy to handle and easy to use
- Comfort and protection
- Sustained and controlled silver release
- Supports faster healing\*

## Usage

Physiotulle Ag is indicated for low to highly exuding chronic and acute wounds. Physiotulle Ag can be used to progress wounds with delayed healing due to critical colonization or where risk of infection. Is safe for use with MRI.

## Physiotulle Ag

# Biatain<sup>®</sup> Ibu

Biatain Ibu is a soft and flexible absorbent foam dressing. Only Biatain Ibu offers a unique combination of excellent exudate management with continuous release of ibuprofen.

- Soft and comfortable dressing
- Combines moist wound healing with local release of ibuprofen
- Wound healing does not have to be painful

## Usage

Biatain Ibu is indicated for a wide range of low- to highly exuding wounds. This includes acute wounds such as second degree burns, donor sites, postoperative wounds and traumatic wounds; and chronic wounds such as leg ulcers, pressure ulcers and non-infected diabetic foot ulcers. Biatain Ibu is suitable for use in combination with compression therapy. Biatain Ibu Soft-Hold is contra-indicated for donor sites.

# Debridement of infected and non-infected wounds

# Purilon®

Purilon is a gentle hydrogel consisting of natural ingredients without any additives. It is used for wounds that need effective and gentle debridement of necrotic tissue thereby paving the way for faster wound healing.

- Excellent absorption and re-hydration
- Easy to apply
- Counteracts leakage and maceration

## Usage

Purilon gel is indicated for sloughy and necrotic wounds such as leg ulcers, pressure ulcers, non-infected diabetic foot ulcers, and it may be used on first and second degree burns. The gel may be used throughout the healing process to provide a moist healing environment. Purilon gel should be used in conjunction with a secondary dressing.

# Protection of wound and skin

# Comfeel® Plus Transparent

**Ensured protection. Faster healing.\***

Comfeel Plus Transparent hydrocolloid dressing is a thin and flexible solution intended for non-to-low exuding wounds. Comfeel Plus Transparent allows for wound inspection without changing or lifting the dressing.

- Ensured protection
- Wound monitoring
- User-friendly design

## Usage

Comfeel Plus Transparent can be used for treatment of non-to-low exuding wounds in the initial and final stages of wound healing. Comfeel Plus Transparent is indicated for pressure ulcers, leg ulcers, superficial burns, donor sites, postoperative wounds, and skin abrasions. The dressing can stay on the wound for up to 7 days depending on the specific wound characteristics.

# Comfeel® Plus

**Ensured protection. Faster healing.\***

Comfeel Plus is a semi-permeable hydrocolloid dressing with calcium alginate, providing a moist wound healing environment\*

- Ensured protection
- Wound monitoring
- User-friendly design

## Usage

Comfeel Plus can be used for treatment of low-to-moderate exuding wounds in the initial and final stages of wound healing. Comfeel Plus is indicated for pressure ulcers, leg ulcers, superficial burns, donor sites, post-operative wounds, and skin abrasions. The dressing can stay on for up to 7 days depending on the specific wound characteristics.

# Coloplast® Professional

Coloplast Professional is an education and collaboration platform supporting and guiding you in deepening your knowledge, accelerating your clinical experience and shaping the future of patient care. With Coloplast Professional we want to support healthcare professionals to efficiently and confidently manage wounds and skin complications to improve patient outcomes, by providing:

**Education  
& Guidance**

**Conferences  
& Events**

**Advisory boards  
& Panels**

## The Triangle of Wound Assessment offers a systematic approach to wound management

The Triangle of Wound Assessment is a medical assessment tool which provides a framework to assess all three areas of the wound, while remembering the patient behind the wound within their social context.

Optimal wound management starts with a holistic wound assessment and all three areas of the triangle should be considered to support optimal clinical decision making<sup>14-17</sup>

## An educational programme for healthcare professionals working with wounds

The programme aims to **increase knowledge** of modern wound healing principles and **improve the standard of care** for wound patients around the world. It is part of our ongoing **dedication to wound care** education and support.

Scan the QR Code to visit the Coloplast HEAL webpage

HEAL consists of 10 in-depth courses addressing different wound care topics, available as e-learning or live seminars. All courses have been peer reviewed and endorsed by the European Wound Management Association.

General Wound care courses	Skin Integrity	Wound Healing	Wound Assess- ment	Moist Wound Healing
	Pressure Injury Prevention	Pressure Injury Management	Diabetic Foot Ulcers	Leg Ulcers
Focused Wound care courses	Acute Wounds	Wound Infections

Our business includes Ostomy Care, Continence Care, Wound & Skin Care and Interventional Urology. We operate globally and employ about 12,000 employees. From getting to the grocery store to biking up a mountain, users' hopes and aspirations fuel our passion of finding new ways to help make their lives easier. We constantly question the status quo across every aspect of intimate healthcare and seek to understand our users, to better anticipate and advocate for their needs. Ever since the founding of Coloplast in 1957, we have worked closely with healthcare professionals and the users of our products to discover new solutions as well as new ways to create solutions that are sensitive to their special needs.

Together, we move care forward.

Ostomy care/ Continence Care/ Wound & Skin Care/ Interventional Urology

Coloplast develops products and services that make life easier for people with very personal and private medical conditions. Working closely with the people who use our products, we create solutions that are sensitive to their special needs. We call this intimate healthcare. Our business includes Ostomy Care, Continence Care, Wound and Skin Care and Interventional Urology. We operate globally and employ about 12,000 employees.
